JAVA ASSIGNMENT 05

Q1. Write a Java program to create a new array list, add some colors (string) and print out the collection.

CODE:

```
import java.util.ArrayList;
public class Assign05 {
    public static void main (String[] args){
        ArrayList<String> colors = new ArrayList<String>();
        colors.add("Red");
        colors.add("Blue");
        colors.add("Yellow");
        colors.add("Green");
        System.out.println(colors);
    }
    }
```

OUTPUT:

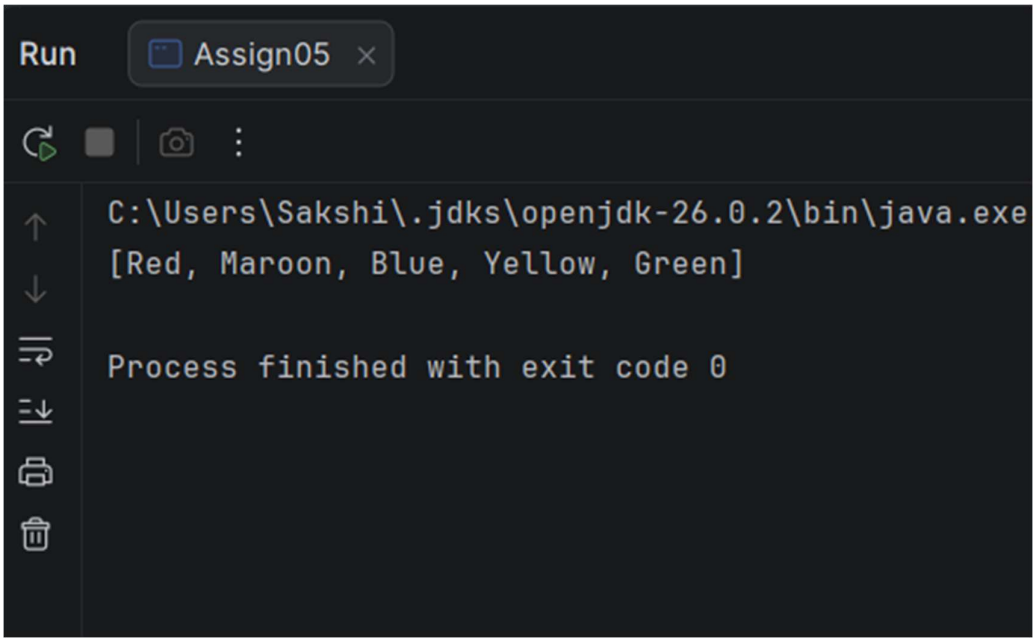

Q2. Modify the above Java program to insert an element into the array list at the first position.

CODE:

```
import java.util.ArrayList;
public class Assign05 {
    public static void main (String[] args){
        ArrayList<String> colors = new ArrayList<String>();
        colors.add("Red");
        colors.add("Blue");
        colors.add("Yellow");
        colors.add("Green");
        colors.add(1, "Maroon");
        System.out.println(colors);
    }
    }
```

OUTPUT:

Q3. Modify the above Java program to retrieve an element (at a specified index) from a given array list.

CODE:

```
import java.util.ArrayList;
public class Assign05 {
    public static void main (String[] args){
        ArrayList<String> colors = new ArrayList<String>();
        colors.add("Red");
        colors.add("Blue");
        colors.add("Yellow");
        colors.add("Green");
        String color = colors.get(2);
        System.out.println("Color at 2: " +color);
    }
    }
```

OUTPUT:

Q4. Modify the above Java program to update specific array element by given element

CODE:

```
import java.util.ArrayList;
public class Assign05 {
    public static void main (String[] args){
        ArrayList<String> colors = new ArrayList<String>();
        colors.add("Red");
        colors.add("Blue");
```

```
        colors.add("Yellow");
        colors.add("Green");
       colors.set(1, "Indigo");
        System.out.println(colors);
    }
    }
```

OUTPUT:

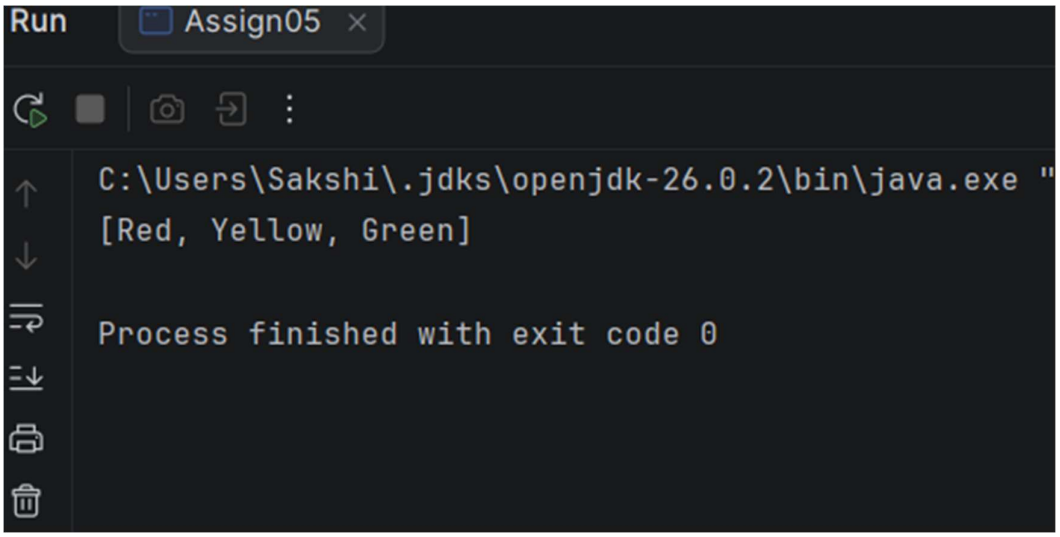

Q5. Modify the above Java program to remove the third element from a array list.

CODE:

```
import java.util.ArrayList;
public class Assign05 {
    public static void main (String[] args){
        ArrayList<String> colors = new ArrayList<String>();
        colors.add("Red");
        colors.add("Blue");
        colors.add("Yellow");
        colors.add("Green");
       colors.remove(1);
        System.out.println(colors);
```

```
    }
    }
```

OUTPUT:

Q6. Modify the above Java program to search an element in a array list

CODE:

```
import java.util.ArrayList;
public class Assign05 {
    public static void main (String[] args){
        ArrayList<String> colors = new ArrayList<String>();
        colors.add("Red");
        colors.add("Blue");
        colors.add("Yellow");
        colors.add("Green");
        if (colors.contains("Green")) {
            System.out.println("Color is found");
        }
        else {
            System.out.println("Color is not found");
        }
    }
    }
```

OUTPUT:

Run
Assign05
C:\Users\Sakshi\.jdks\openjdk-26.0.2\bin\java.exe
Color is found
Process finished with exit code 0
