

Assignment No.1

PAGE No.

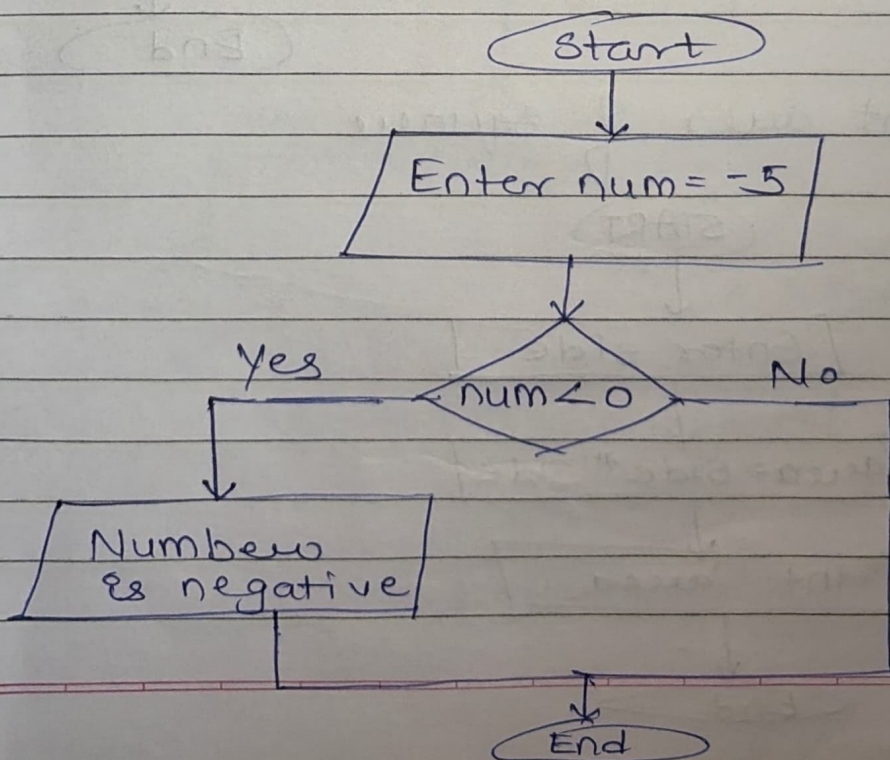

DATE

/ /

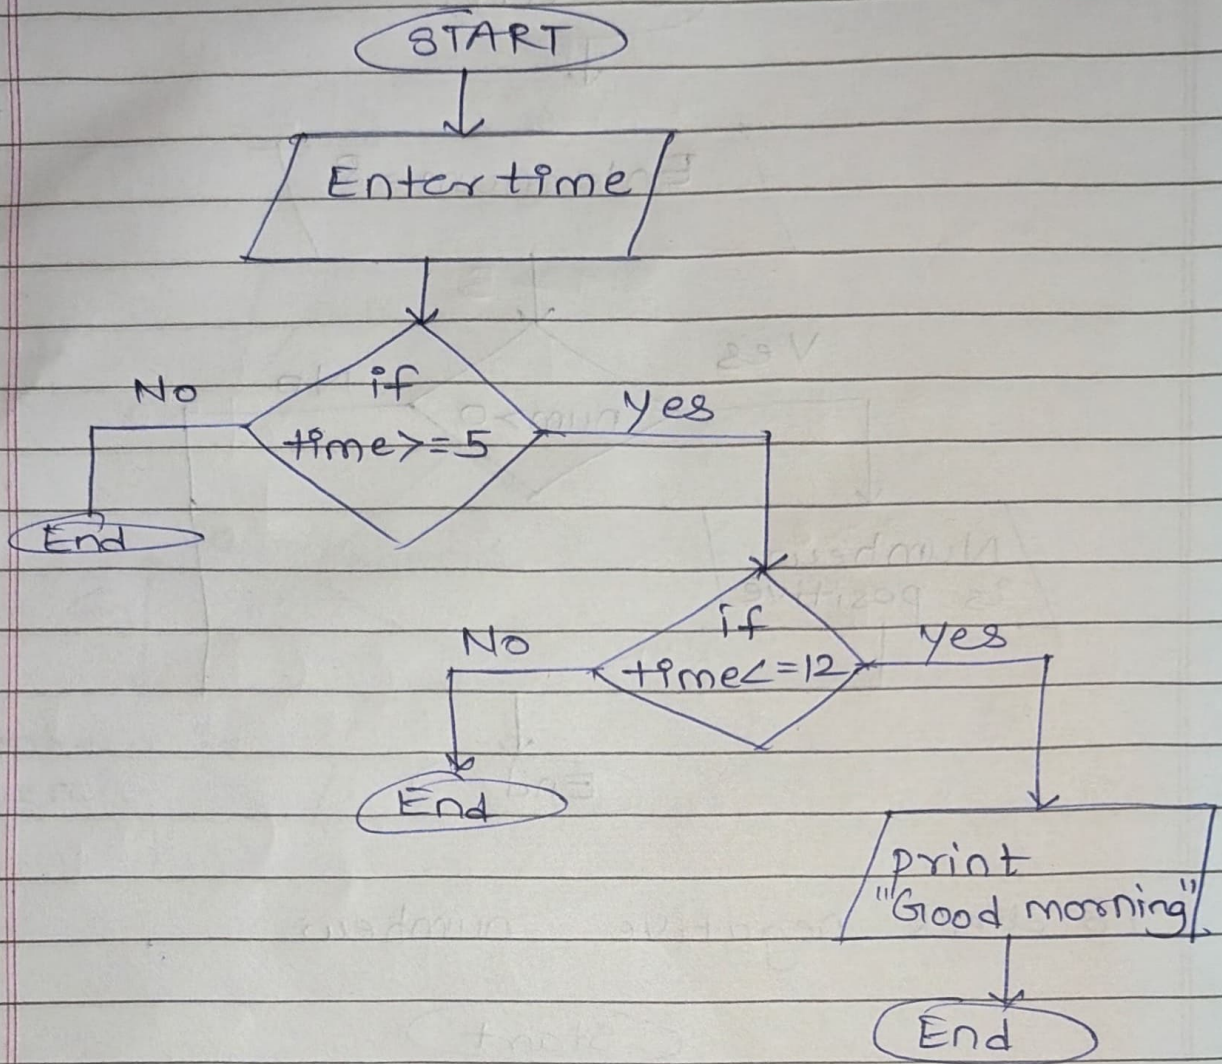

1] To check positive numbers

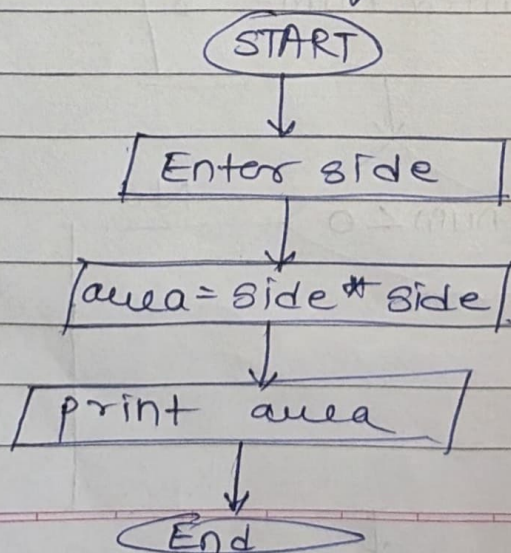

2] To check negative numbers

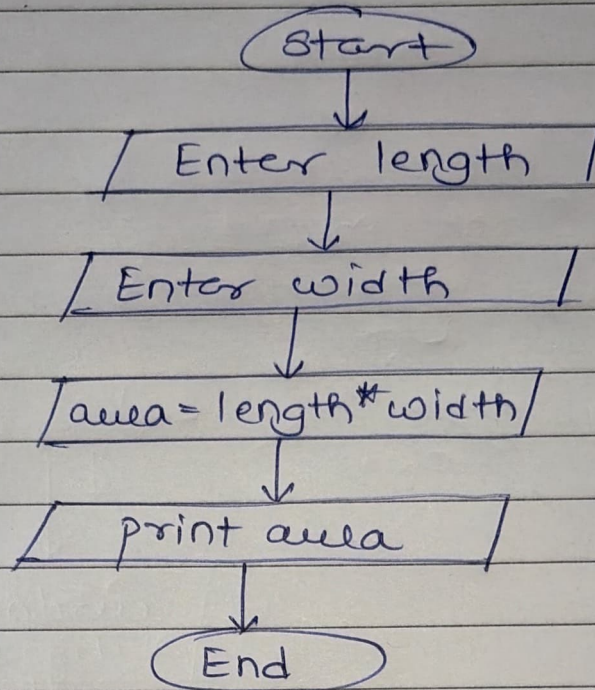

4] To display good morning message between 5AM & and 12PM

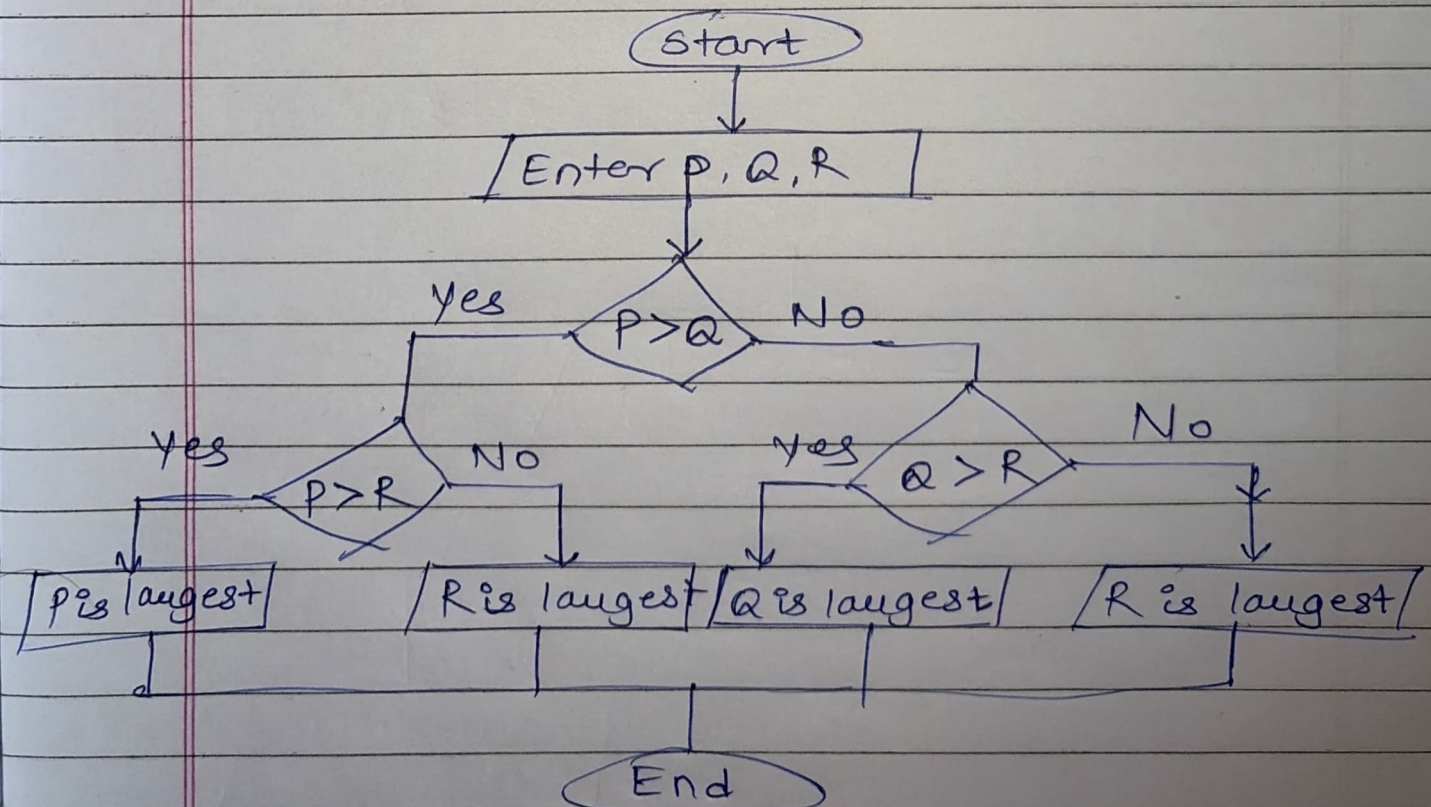

5] To print area of square

6] To print area of rectangle.

7] Largest of three numbers

Main.java

Run

Output

```
1 public class Main
2 {
3     public static void main(String[] args) {
4         int num = 40;
5
6         if (num > 0){
7             System.out.println("Number is Positive");
8         }else {
9             System.out.println("Number is Negative");
10        }
11    }
12 }
```

Number is Positive

=== Code Execution Successful ===

```
1 public class Main
2 {
3     public static void main(String[] args) {
4         int num = -8;
5
6         if (num < 0){
7             System.out.println("Number is Negative");
8         }else {
9             System.out.println("Number is Positive");
10        }
11    }
12 }
```

Number is Negative

=== Code Execution Successful ===

```
1 public class Main
2 {
3     public static void main(String[] args) {
4         int num = 5;
5
6         if (num % 2 == 0){
7             System.out.println("Number is even");
8         }else {
9             System.out.println("Number is odd");
10        }
11    }
12 }
```

Number is odd

== Code Execution Successful ==

Main.java

Run

Output

```
1 public class Main
2 {
3     public static void main(String[] args) {
4         int num = 12;
5
6         if (num % 2 == 0){
7             System.out.println("Number is even");
8         }else {
9             System.out.println("Number is odd");
10        }
11    }
12 }
```

Number is even

== Code Execution Successful ==

```
1 public class Main
2 {
3     public static void main(String[] args) {
4         int time = 8;
5
6         if (time >= 5 && time <= 12){
7             System.out.println("Good Morning");
8         }
9     }
10 }
```

Good Morning

=== Code Execution Successful ===

```
1 public class Rectangle {  
2     public static void main(String[] args) {  
3  
4         int length = 9;  
5         int width = 10;  
6  
7         int area = length * width;  
8  
9         System.out.println("Area = " + area);  
10    }  
11 }
```

Area = 90

=== Code Execution Successful ===

```
1 public class Square {  
2     public static void main(String[] args) {  
3  
4         int side = 15;  
5         int area = side * side;  
6  
7         System.out.println("Area = " + area);  
8     }  
9 }
```

Area = 225

=== Code Execution Successful ===

```
1 public class Largest {
2     public static void main(String[] args) {
3
4         int p = 10;
5         int q = 20;
6         int r = 15;
7
8         if (p > q) {
9             if (p > r) {
10                 System.out.println("P is largest");
11             } else {
12                 System.out.println("R is largest");
13             }
14         } else {
15             if (q > r) {
16                 System.out.println("Q is largest");
17             } else {
18                 System.out.println("R is largest");
19             }
20         }
21     }
22 }
```

Q is largest

=== Code Execution Successful ===
